Bardhaman, West Bengal 713101

ND

SUMMARY

Computer Science undergraduate specializing in AI & Data Science, with two internships and a proven track record of delivering impactful work. Over the past year, I have transformed raw data into decisions that teams rely on – reducing reporting time by 40% at CodeAlpha and achieving 95%+ accuracy in ML research. I am driven by curiosity, asking why the numbers look the way they do and persisting until the answer is actionable.

EXPERIENCE

Data Analyst Intern

CodeAlpha

01/2026 – Present *Kolkata, India (Remote)*

- Developed 20+ optimized SQL queries on datasets exceeding 100K rows, cutting manual reporting time by 40% across 5+ concurrent projects.
- Identified statistical trends across 3+ datasets per week; generated reports adopted by 4 cross-functional teams to guide product strategy.
- Built automated data validation pipelines that eliminated duplicate records, reducing the downstream error rate by 30% and improving data reliability.

★ **Key Achievement:** SQL pipeline optimization reduced reporting time by 40%, adopted by 4 teams.

Data Analytics Intern

Cognifyz Technologies

02/2026 – 03/2026 *Remote*

- Conducted EDA on 5+ real-world business datasets using Python (Pandas, Matplotlib), uncovering 3 high-impact patterns that directly shaped strategic recommendations.
- Designed and delivered 4+ interactive visual dashboards that reduced stakeholder review time by 50% and improved cross-team data comprehension.

★ **Key Achievement:** Dashboard suite delivered within a 1-month internship, adopted company-wide.

EDUCATION

Bachelor of Technology

Sikkim Manipal Institute of Technology

08/2024 – 08/2028 *Sikkim, India* Computer Science Engineering – AI & Data Science

Relevant Coursework: Machine Learning, Algorithms, Database Systems, Artificial Intelligence, Statistical Analysis

Higher Secondary Certificate (Science)

Burdwan Sri Ramkrishna Saradapith Uchcha Vidyalaya

07/2021 *Bardhaman, India*

RESEARCH

AI in Skin Cancer Detection – Hybrid Deep Learning Model

Developed a CNN-ensemble hybrid architecture for dermoscopic image classification, achieving 95%+ accuracy across 7 cancer subtypes through transfer learning and data augmentation techniques.

CERTIFICATIONS

Foundations: Data, Data, Everywhere – Google

Introduction to Software Engineering – IBM

Data Analytics Job Simulation – Deloitte Australia

LANGUAGES

English

Professional

Hindi

Native

Bengali

Native

SKILLS

Languages

Python SQL JavaScript TypeScript

Data & Machine Learning

Pandas NumPy Matplotlib

Scikit-Learn TensorFlow OpenCV

Web & DevTools

Flask React Git GitHub

Jupyter VS Code Tailwind

Core Competencies

Machine Learning Deep Learning

NLP EDA Data Visualization

REST API Statistical Modeling

PROJECTS

NLP-Powered Document Summarization

Python, NLP, Flask

Deployed a transformer-based web application that generates structured document summaries, significantly reducing content review time for end users.

ML Model for Horoscope Forecasting

Python, Scikit-Learn, React

Trained prediction models on astrological datasets; integrated real-time inference through a React front-end and Python API.

Computer Vision Crowd Density Monitor

Python, OpenCV

Built a real-time crowd monitoring system using computer vision techniques, reducing overcrowding risk at high-footfall public venues.
